OWNER REVIEW PACKET · NOVEMBER 7, 2026

An editable website, built on what you already have.

Keep the working catalog, design and quote foundations. Add a clear, structured editing workspace inside Commerce OS so routine website updates need no code or deployments.

20
Existing modules inventoried

20
Proposed reusable components

80
Proposed acceptance cases

0
Application changes or deployments

> **This is the review step you requested.** The editor is a clearly labelled prototype. No CMS was implemented, no website content published, no database migration applied, and no paid service purchased. The visual reference mentioned in your brief was not included in the current upload; layouts use your written direction and remain provisional.

Inspected local synthetic development UI and source at `f5cb025`. Production infrastructure and the Supabase project were not accessed.

THE RECOMMENDED DECISION

Extend Commerce OS with a native, bounded studio.

Use the existing authentication, PostgreSQL, domain commands and asset records. Let owners edit approved structured components, choose canonical products and publish versioned releases. Keep pricing, manufacturing, private artwork, transactions and store eligibility in their existing systems of record.

Preserve successful work

Both Next.js applications; canonical products and variants; approved product derivatives; private design versions and proofs; saved RFQs and quote worksheets; store membership, windows and budgets; audit/outbox; Coming Soon boundaries.

Avoid unnecessary services

Native integration has the lowest overhead for this existing system, but still needs engineering and maintenance. Payload is a credible embedded alternative if a short proof establishes safe auth/RLS/catalog integration. Directus and Sanity introduce service/licensing/plan tradeoffs. None was installed.

The first complete implementation milestone should be: **edit homepage hero → save draft → preview desktop/tablet/mobile → publish a reviewed revision → restore a previous revision.**

OBSERVED, NOT ASSUMED

Useful foundations. Clear gaps.

The homepage, menus, footer and theme remain hardcoded. Marketing can create plain drafts and campaign previews, but those records do not yet power editable website pages. Catalog publication and private artwork controls are valuable foundations for the studio.

CUSTOMER WORKFLOW	CURRENT INSPECTED BEHAVIOR	REQUIRED EXTENSION
Homepage	Partial Hardcoded hero, cards and quote CTA.	Versioned blocks for products, services, solutions, brands and campaigns.
Product discovery	Partial Basic filters, swatches and capped client paging.	Canonical taxonomy, curated order, compatible images and proper server pagination.
Configuration	Synthetic subset Variant, quantity, method/location and validated quote lines.	Material/option compatibility from Configuration; no CMS checkout override.
Creative Studio	Preview subset Private uploads, editable designs, saved versions and visual proofs.	Approved public presets; preserve exact variant/design/proof binding. Production remains gated.
Build Your Own Bundle	Partial Kit quantities, saved bundles and quote handoff.	Exact per-component specifications/shared artwork and durable agreement context; unknown is never $0.
Organization stores	Partial Store IDs, membership, assortments, windows and budgets.	Scoped themes/banners/collections, Add to Store, and active-member read enforcement.

CUSTOMER WORKFLOW	CURRENT INSPECTED BEHAVIOR	REQUIRED EXTENSION
Solutions	Missing dedicated pages Products and quote intake can be reused.	Outcome pages connected to canonical collections for trade shows, uniforms, gifting and fundraising.
Quote / proof / order / reorder	Reviewed quote subset RFQ, operator worksheet, issued quote and visual-proof foundations.	Cohesive handoffs and fresh reorder validation; paid checkout still needs separate activation.

Fresh browser evidence

Nine current views captured. Four owner module reads returned HTTP 200. No page JavaScript errors or unintended homepage overflow at 1440 and 390 px. Zero content mutations attempted.

The mobile account button has one critical accessible-name failure. Desktop automated rules exercised reported none; this is not accessibility certification.

Foundation blockers

Hosted demo data/files can reset after inactivity. Scheduled publishing needs durable jobs and a reliable executor. Manager/Marketing permissions need alignment. Private store reads need active-member checks; existing membership protection must be preserved.

Missing bundle totals can appear as zero. Catalog public reads cap products and variants independently.

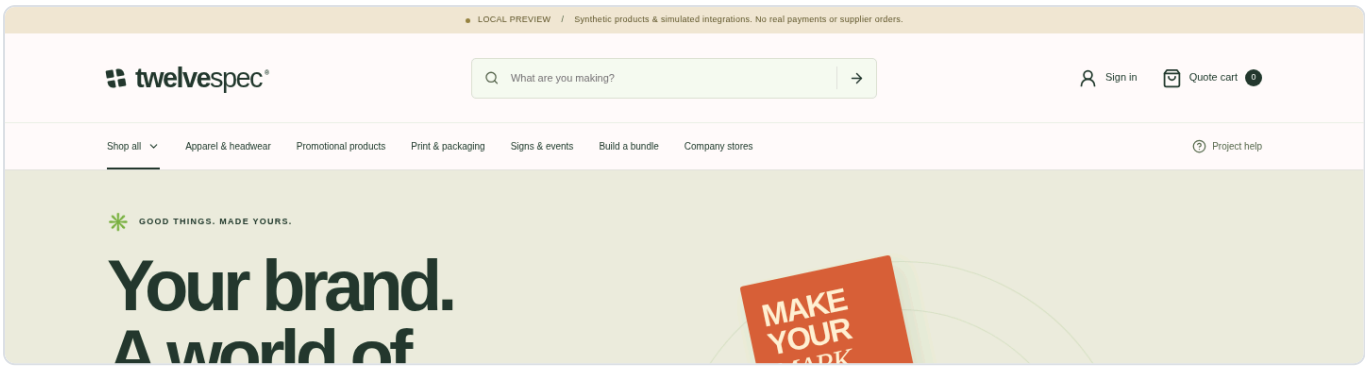

YOUR WRITTEN VISUAL DIRECTION

White, charcoal and confident vermilion.

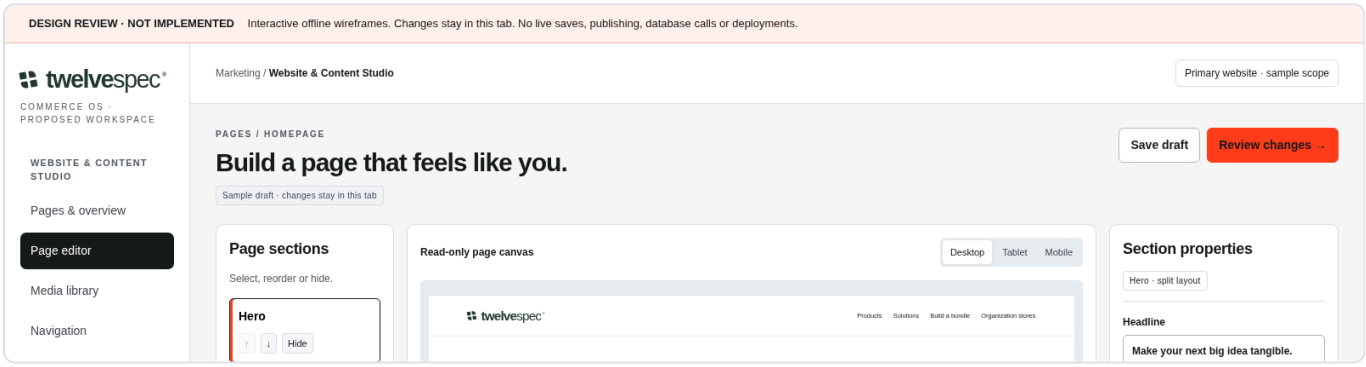

Replace the current cream/lime/forest presentation with clean neutral surfaces, readable typography, refined cards and accessible mega menus. Preserve the current logo and owned assets. Use rights-reviewed real photography when available; the current demo uses synthetic illustrations.

#FFFFFF · white | #F5F6F7 · neutral | #17191B · charcoal | #FF3F1A · vermilion

White normal text on vermilion is only 3.513:1. Use charcoal labels on accent or white on charcoal, alongside tested focus, motion and responsive states.

Actual development storefront · current hardcoded presentation.

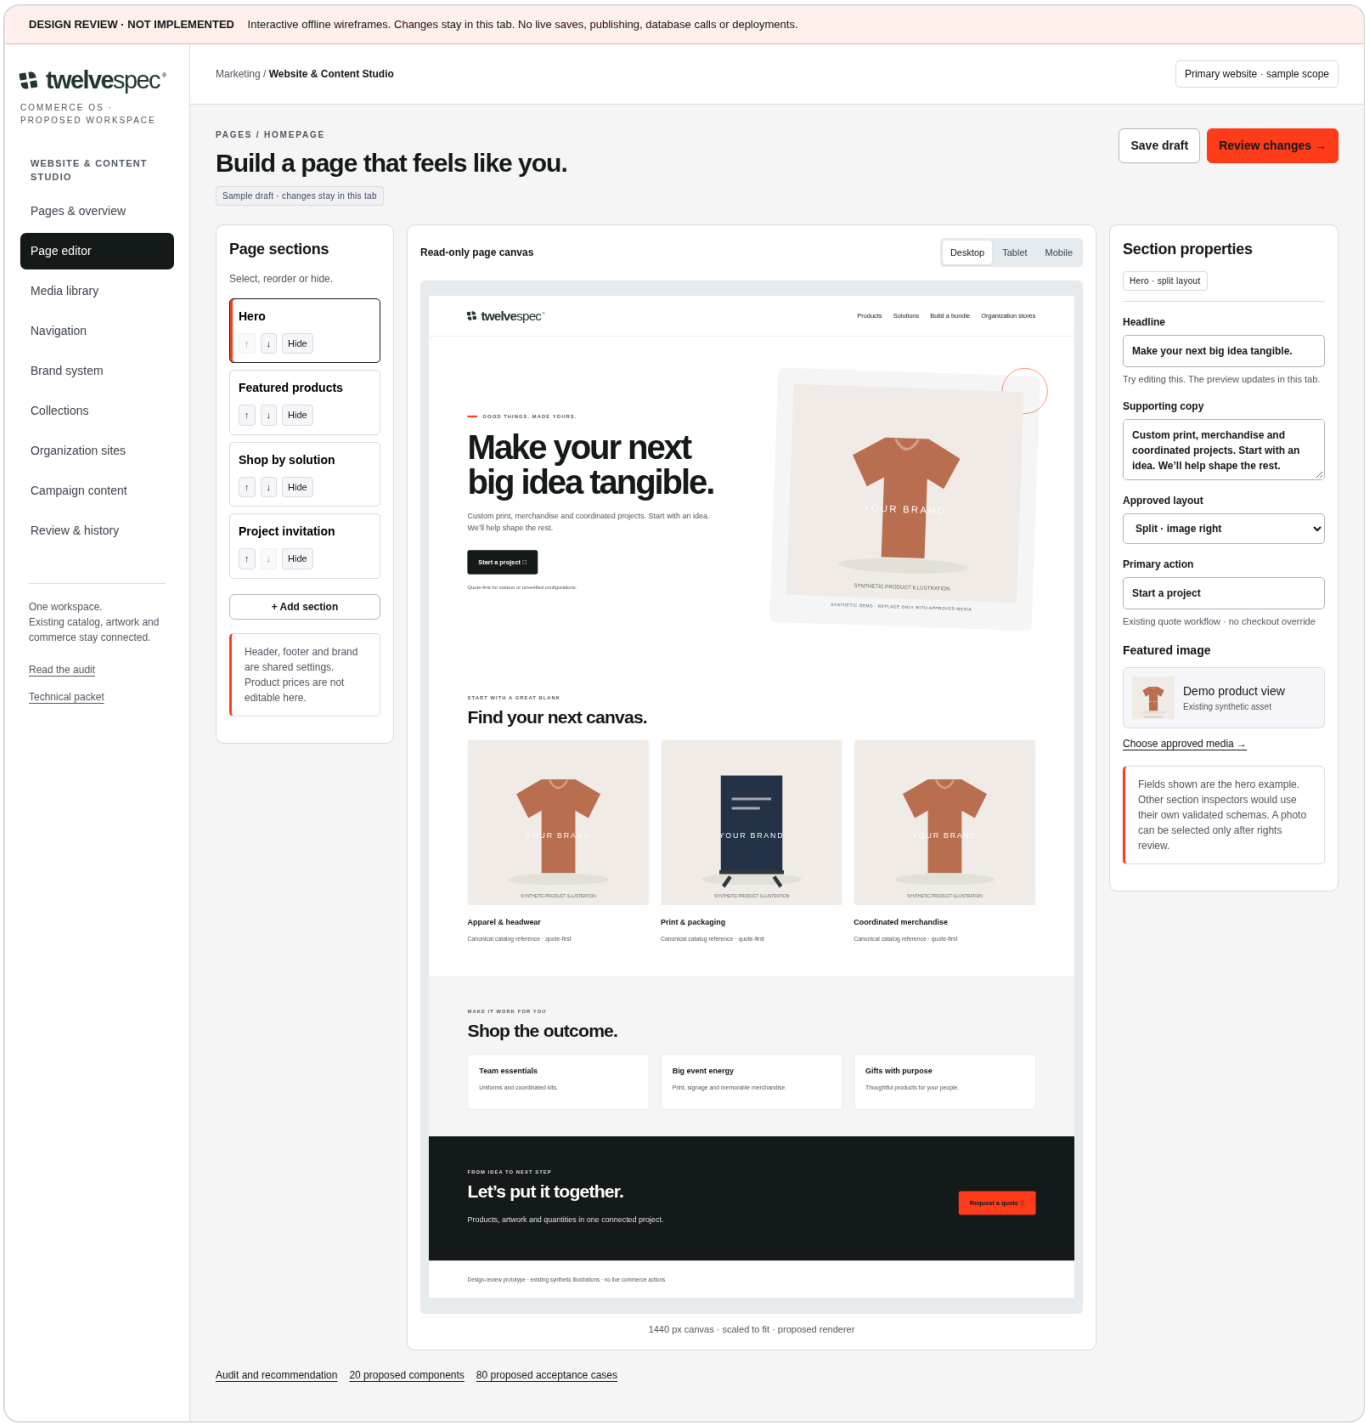

Proposed admin and live-canvas direction · review prototype, not implemented.

ADMINISTRATIVE EXPERIENCE

Change the content. See the result. Review the release.

The editor uses a section list, read-only page canvas and validated property inspector. Try changing the sample headline, selecting device widths, moving/hiding sections, adding an example FAQ and opening the release review. These actions affect this prototype only.

Owner edits approved fields rather than HTML. Canonical product prices and private artwork are outside the page builder.

The complete packet includes nine interactive screens and their screenshots. Open **06-studio-wireframes.html** in the extracted folder to explore them. This PDF is the review overview; technical appendices and full acceptance

cases are separate files.

ARCHITECTURE AND DATA

One editorial layer. Explicit relationships.

1 · Edit and preview

Commerce OS → existing auth/kernel → structured drafts and immutable revisions.

2 · Validate and activate

Selected approved changes → rights and references → immutable release + atomic site pointer.

3 · Render safely

Existing storefront → shared components → current public product projections and approved derivatives.

Reuse `content_assets`, `content_revisions`, `assets`, `brand_kits`, `products`, `variants`, `collections`, `stores`, memberships and campaign IDs. Add five proposed records only after confirming the smallest migration:

RECORD	PURPOSE
websites	Primary/store scope, locale/timezone and active release pointer.
website_releases	Immutable coherent page, header, footer and brand revision manifest.
website_publish_jobs	Approved scheduled activation with cancellation, expected generation, expiry and retries.
content_references	Typed scoped dependencies on products, variants, collections, assets, stores and approved templates.
collection_products	Catalog-owned ordered/featured membership, replacing the current JSON ID-array limitation.

> **No second product database.** Documents store stable references. Private original artwork/supplier files cannot be made public by pasting an asset ID. Drafts are never public DTOs. Publication/rollback rechecks current rights and product eligibility. Public caches have explicit freshness/revocation tests.

Owner can edit and publish independently after validation. Editors, publishers, designers and organization administrators receive explicit scoped capabilities. Studio content cannot alter checkout eligibility, proof/production approvals, budgets or financial transactions.

Routine content edits update database revisions without Git or deployment. New component types, security fixes and schema changes still require engineering releases.

PHASED PRESERVE / MODIFY / ADD / ELIMINATE PLAN

Deliver complete workflows in a measured order.

0 **Review the proposal**

Audit, architecture, provisional visual direction and explicit scope.

1 **Make content durable and scoped**

Persistent data/media, recovery, capabilities, immutable revisions and public-reader/RLS proof.

2 **Ship one complete editing workflow**

Homepage hero → draft → three-device preview → reviewed publish → rollback, with real browser/API/data evidence.

3 **Expand the reusable studio**

Approved sections, media rights, menu/mega-menu editing, brand tokens and preserved logos.

4 **Curate the canonical catalog**

Collections, taxonomy, variants/images, solutions, SEO and complete server pagination.

5 **Support organization sites + schedules**

Scoped themes/assortments, Add to Store, durable schedules and proven executor waking.

6 **Reuse campaign and creative assets**

Landing pages, email/social creative, checked downloads/lookbooks; no automatic sends.

7 **Accept the connected experience**

All eight workflows, original regressions, mobile, security, recovery and owner usability.

> **Every phase has an observable exit gate.** Failed checks stay visible. Video, exports, scheduled publication and future modules stay unavailable until their dependencies pass. No production deployment, new fee or live integration is implied by reviewing this plan.

EVIDENCE BEFORE COMPLETION

80 proposed tests. Zero claimed CMS passes.

The matrix covers page lifecycle, keyboard builder controls, private previews, atomic selected-change publishing, rollback, media rights, brand/nav, merchandising, organization isolation, campaign reuse, security, performance, mobile, recovery and real owner tasks.

Core acceptance

- Drafts never change the public site.
- Publish pins a coherent approved release.
- Unrelated drafts remain private.
- Conflicting edits never silently overwrite.
- Rollback cannot revive revoked media/products.
- Private data and inactive members fail closed.

Owner and operational acceptance

- Six routine tasks need no Git, SQL or deploy.
- Desktop/tablet/mobile and keyboard work.
- Persistent data/media survive restart and restore.
- Schedules wake reliably and replay safely.
- Quote-first, exact designs and store rules survive.
- Measured performance and accessibility gates pass.

Earlier records of 169 automated checks and 11 browser journeys are separate regression evidence. They were not rerun as part of this audit and do not establish future CMS acceptance. All 80 new cases are **PROPOSED_NOT_RUN**. Prototype checks establish only that the review artifact works.

Full active V1 and sales-readiness gaps remain open. This packet verifies no new supplier, payment, Shopify or production integration and does not authorize selling.

YOUR COMPLETE REVIEW PACKAGE

All nine deliverables, with evidence.

DELIVERABLE 01 Current capabilities + eight-workflow gap analysis
`01-current-state-audit.md`
DELIVERABLE 02 Current versus requested visual direction
`02-design-comparison.md`
DELIVERABLE 03CMS architecture + build versus buy
`03-architecture-decision.md`
DELIVERABLE 0420 components + editable properties
`04-components.csv`
DELIVERABLE 05 Content model + data relationships
`05-content-model.md`
DELIVERABLE 06 Nine interactive admin wireframes
`06-studio-wireframes.html`

DELIVERABLE 07 Preserve / modify / add / eliminate plan
`07-phased-plan.md`
DELIVERABLE 0880 proposed acceptance cases
`08-acceptance-tests.csv`
DELIVERABLE 09 Verification, usability + performance strategy
`09-acceptance-plan.md`
Illustrative JSON Schema · All-module source inventory · Fresh browser evidence · Official research and code citations

> **What to review now:** the native studio recommendation, the provisional visual direction, the data/permission boundaries and the phased scope. Section 6 of your brief requires that review before implementation. No application change or deployment was performed.

Prepared from the uploaded brief, inspected application source, local synthetic browser checks and cited official documentation. Reference image unavailable in the current upload. Existing TwelveSpec production systems were not accessed or modified.
Original source baseline: f5cb02511022909edb396dbd79c4be397858f67d. Offline packet entry point: **review.html**; prototype: **06-studio-wireframes.html**.
